AUTHOR INDEX

Volumes 92, 93, 94, and 95, 1993

ABBAS, T., COSTEN, P., LOCKWOOD, F. C., AND ROMO-MILLARES, C. A.
The Effect of Particle Size on NO Formation in a Large-Scale Pulverized Coal-Fired Laboratory Furnace: Measurements and Modeling, 93: 316

ADOMEIT, G.: see Ciezki, H. K.

AHO, M. J., HÄMÄLÄINEN, J. P., and TUMMAVUORI, J. L.
Importance of Solid Fuel Properties to Nitrogen Oxide Formation Through HCN and NH_3 in Small Particle Combustion, 95: 22

ALDUSHIN, A. P.
New Results in the Theory of Filtration Combustion, 94: 308

ALLEN, M. G., BUTLER, C. T., JOHNSON, S. A., LO, E. Y., and RUSSO, F.
An Imaging Neural Network Combustion Control System for Utility Boiler Applications, 94: 205

ANAGNOSTOPOULOS, J. S., SARGIANOS, N. P., and BERGELES, G.
The Prediction of Pulverized Greek Lignite Combustion in Axisymmetric Furnaces, 92: 209

ANDERSON, W. R.: see Sausa, R. C.

ANDOH, E.
Flame Spreading into a Hole with Rear End Open in a Double-Base Propellant: The Effect of Hole Diameter, 92: 334

ARAKAWA, A., SAITO, K., and GRUVER, W. A.
Automated Infrared Imaging Temperature Measurement with Application to Upward Flame Spread Studies. Part I, 92: 222

ARIS, R.: see Vlachos, D. G.

ASTILL, A. G.: see Williams, D. R.

ATAL, A., and LEVENDIS, Y. A.
Observations on the Combustion Behavior of Coal Water Fuels and Coal Water Fuels Impregnated with Calcium Magnesium Acetate, 93: 61

BAKER, C. A.: see Williams, D. R.

BANDARU, R. V.: see Turns, S. R.

BAR-ON, R.: see Sher, E.

BARREIROS, A., CARVALHO, M. G., COSTA, M., and LOCKWOOD, F. C.
Prediction of the Near Burner Region and Measurements of NO_X and Particulate Emissions in Heavy Fuel Oil Spray Flames, 92: 231

BAR-ZIV, E.
Preface to Heterogeneous Combustion Workshop Papers, 95: 341

BAR-ZIV, E.: see Weiss, Y.

BECKSTEAD, M. W.: see Raun, R. L.

BENZ, F.: see Steinberg, T. A.

BERGELES, G.: see Anagnostopoulos, J. S.

BERNSTEIN, J. S., FEIN, A., CHOI, J. B., COOL, T. A., SAUSA, R. C., HOWARD, S. L., LOCKE, R. J., and MIZIOLEK, A. W.
Laser-Based Flame Species Profile Measurements: A Comparison with Flame Model Predictions, 92: 85

BESPALOV, E. V.: see Slutsky, V. G.

BHATIA, R., and SIRIGNANO, W. A.
Convective Burning of a Droplet Containing a Single Metal Particle, 93: 215

BHATTACHARJEE, S.
A Comparison of Numerical and Analytical Solution of the Creeping Flame Spread Over Thermally Thin Material, 93: 434

BHATTACHARJEE, S.
A Response to the Comments by M.A. Delichatsios on "A Comparison of Numerical and Analytical Solution of Creeping Flame Spread Over Thermally Thin Material, 95: 340

BISWAS, P.: see Wu, C. Y.

BLAKE, T. R., and MCDONALD, M.
An Examination of Flame Length Data from Vertical Turbulent Diffusion Flames, 94: 426

BONNEFOY, F.: see Gilot, P.

BOROVINSKAYA, I. P.: see Khomenko, I. O.

BOWLES, E. M.: see Koroll, G. W.

BRAATEN, M. E.: see Correa, S. M.

BRADLEY, D.
Obituary: Numa Manson, 94: 216

BRADLEY, D.
Obituary: Ralph Delbourgo, 94: 215

BRAY, K. N. C.: see Kioni, P. N.

BRAY, K. N. C.: see Kostiuk, L. W.

SUBJECT INDEX

Volumes 92, 93, 94, and 95, 1993

1. ASYMPTOTIC ANALYSES

Asymptotic Analysis for the Burning of *n*-Heptane Droplets Using a Four-Step Reduced Mechanism, 93: 375

Asymptotic, Approximate, and Numerical Solutions for the Heatup and Pyrolysis of Materials Including Reradiation Losses, 92: 292

Asymptotic Theory of Flame Extinction with Surface Radiation, 92: 1

A Model for Condensed Combustion Synthesis of Nonstoichiometric Homogenous Solids, 93: 1

New Results in the Theory of Filtration Combustion, 94: 308

Reduced Kinetic Mechanisms and Their Numerical Treatment I: Wet CO Flames, 94: 271

2. COMBUSTION IN PRACTICAL SYSTEMS

Autoignition-Delay Measurement over Lean to Rich Mixtures of n-Butane/Air under Swirl Conditions, 92: 254

Autoignition of *n*-Heptane and *n*-Tetradecane in Engine-like Conditions, 93: 279

Coherent Anti-Stokes Raman Spectroscopy (CARS) and Laser-Induced Fluorescence (LIF) Measurements in a Rocket Engine Plume, 94: 77

An Equilibrium Analysis to Determine the Speciation of Metals in an Incinerator, 93: 31

An Experimental and Modeling Study of Pressure Effects on Tar Release by Rapid Pyrolysis of Cellulose Sheets in a Screen Heater, 95: 47

Fundamental Features of Hydrocarbon Autoignition in a Rapid Compression Machine, 95: 291

Gasification-Induced Densification of Carbons: From Soot to Form Coke, 95: 427

An Imaging Neural Network Combustion Control System for Utility Boiler Applications, 94: 205

Importance of Solid Fuel Properties to Nitrogen Oxide Formation Through HCN and NH_3 in Small Particle Combustion, 95: 22

Low-Frequency Combustion Instability Mechanisms in a Side-Dump Combustor, 94: 363

Low-Frequency Combustion Oscillations in a Model Afterburner, 94: 253

Prediction of the Near Burner Region and Measurements of NO_X and Particulate Emissions in Heavy Fuel Oil Spray Flames, 92: 231

Preface to Heterogeneous Combustion Workshop Papers, 95: 341

Shock-Tube Investigation of Self-Ignition of *n*-Heptane-Air Mixtures Under Engine Relevant Conditions, 93: 421

3. COMBUSTION STABILITY/INSTABILITY

Laminar Burning Velocities and Markstein Numbers of Hydrocarbon/Air Flames, 95: 407

Low-Frequency Combustion Instability Mechanisms in a Side-Dump Combustor, 94: 363

Low-Frequency Combustion Oscillations in a Model Afterburner, 94: 253

A Numerical Model for Temperature Gradient and
Particle Effects on Rijke Burner Oscillations, 94: 1

Preface to Heterogeneous Combustion Workshop Papers, 95: 341

4. COMBUSTION SYSTEMS: ANALYTIC AND NUMERICAL DESCRIPTIONS

Analytical Numerical Modeling of Flame-Balls in Hydrogen-Air Mixtures, 94: 113

Analytical Solution to the Flame Trajectory Based on the Analysis of "Scaling of Buoyant Turbulent Jet Diffusion Flames" by N. Peters and J. Göttgens, 93: 336

Asymptotic Analysis for the Burning of *n*-Heptane Droplets Using a Four-Step Reduced Mechanism, 93: 375

Asymptotic Analysis of Monopropellant Droplet Burning for the Reaction $nA \rightarrow B$, 94: 35

Asymptotic, Approximate, and Numerical Solutions for the Heatup and Pyrolysis of Materials Including Reradiation Losses, 92: 292

Catalytic Combustion of Hydrogen-Air Mixtures in Stagnation Flows, 93: 138

Comparison Between Experimental Measurements and Numerical Predictions of Internal Temperature Distributions of a Droplet Va-

porizing under High-Temperature Convective Conditions, 93: 287
Comments on "A Comparison of Numerical and Analytical Solution of Creeping Flame Spread Over Thermally Thin Material, 95: 336
A Comparison of Flamelet Models for Premixed Turbulent Combustion, 95: 101
A Comparison of Numerical and Analytical Solution of the Creeping Flame Spread Over Thermally Thin Material, 93: 434
The Compositional Structure and the Effects of Exothermicity in a Nonpremixed Planar Jet Flame, 94: 217
A Computational Study of Sooting Limits in Laminar Premixed Flames of Ethane, Ethylene, and Acetylene, 93: 467
Convective Burning of a Droplet Containing a Single Metal Particle, 93: 215
Direct Numerical Simulation of Turbulent Reacting Flow Using a Reduced Hydrogen-Oxygen Mechanism, 95: 247
Direct Simulation and Modeling of Flame-Wall Interaction for Premixed Turbulent Combustion, 95: 118
Direct Simulations of Premixed Turbulent Flames with Nonunity Lewis Numbers, 94: 41
The Effect of Particle Size on NO Formation in a Large-Scale Pulverized Coal-Fired Laboratory Furnace: Measurements and Modeling, 93: 316
Experimental and Numerical Studies of Ditertiary Butyl Peroxide Combustion at High Pressures in a Rapid Compression Machine, 93: 303
Ignition and Extinction of Flames Near Surfaces: Combustion of H_2 in Air, 95: 313
Ignition in an Unsteady Mixing Layer Subject to Strain and Variable Pressure, 95: 31
Kinetic Fundamentals of Alkane Autoignition at Low Temperatures, 93: 202
The Necessity of Using Detailed Kinetics in Models for Premixed Combustion Within Porous Media, 93: 457
Numerical Analysis of Variable-Fluid-Property Effects on the Convective Heat and Mass Transfer of Fuel Droplets, 92: 459
Numerical Modeling of Two-Dimensional Smoldering Processes, 95: 170
Numerical Simulation of Flame Disturbance Growth Induced by a Pressure Gradient, 95: 76
Numerical Simulation of Stoichiometric Premixed Flames Burning CH_3Cl/CH_4/Air Mixtures at Atmospheric Pressure with a Full and Short Reaction Mechanism and Comparison of the Flame Speeds with Experimental Results, 92: 419
Parallel Simulations of Partially Stirred Methane Combustion, 94: 469
A Reduced Kinetic Mechanism for Premixed CH_3Cl/Air Flames, 92: 440
Reduced Kinetic Mechanisms and Their Numerical Treatment I: Wet CO Flames, 94: 271
A Response to the Comments by M.A. Delichatsios on "A Comparison of Numerical and Analytical Solution of Creeping Flame Spread Over Thermally Thin Material, 95: 340
Role of Inner and Outer Structures in Transitional Jet Diffusion Flame, 92: 274
Semiempirical Molecular Orbital Estimation of the Relative Stability of Bianthryls Produced by Anthracene Pyrolysis, 94: 233
Similarity Solutions in Buoyancy-Controlled Turbulent Diffusion Flame Modeling (Turbulent Buoyant Diffusion Flame Modeling), 92: 308
Simulation of Electric Field Effects in Premixed Methane Flames, 94: 433

5. COMBUSTION SYSTEMS: MODELING AND SCALING
Book Review of Coal Quality and Combustion Performance: An International Perspective by J.F. Unswerth et al., 95: 244
Catalytic Combustion of Hydrogen-Air Mixtures in Stagnation Flows, 93: 138
Coal Burning Properties Determined from CO_2 Profiles, 94: 449
Coherent Anti-Stokes Raman Spectroscopy (CARS) and Laser-Induced Fluorescence (LIF) Measurements in a Rocket Engine Plume, 94: 77
A Comparison of Flamelet Models for Premixed Turbulent Combustion, 95: 101
Computational Simulation of Diamond Chemical Vapor Deposition in Premixed $C_2H_2/O_2/H_2$ and CH_4/O_2-Strained Flames, 92: 144
Direct Numerical Simulation of Turbulent Reacting Flow Using a Reduced Hydrogen-Oxygen Mechanism, 95: 247
An Examination of Flame Length Data from Vertical Turbulent Diffusion Flames, 94: 426
An Experimental and Modeling Study of Pres-

sure Effects on Tar Release by Rapid Pyrolysis of Cellulose Sheets in a Screen Heater, 95: 47
Experimental and Numerical Studies of Ditertiary Butyl Peroxide Combustion at High Pressures in a Rapid Compression Machine, 93: 303
Global Rates of Devolatilization for Various Coal Types, 94: 293
High-Energy Nd-Yag Laser Ignition of Coals: Experimental Observations, 93: 19
High-Energy Nd-Yag Laser Ignition of Coals: Modeling Analysis, 94: 349
The Impact of Soot on the Combustion Characteristics of Coal Particles of Various Types, 95: 1
The Influence of the Heat Capacity and Diluent on Detonation Structure, 95: 206
Laser-Based Flame Species Profile Measurements: A Comparison with Flame Model Predictions, 92: 85
A Model for Condensed Combustion Synthesis of Nonstoichiometric Homogenous Solids, 93: 1
A Model of Coal Combustion Dynamics in a Fluidized Bed Combuster, 95: 219
Numerical Investigation of the Ignition of Dilute Fuel Sprays Including Detailed Chemistry, 93: 239
A Numerical Model for Temperature Gradient and Particle Effects on Rijke Burner Oscillations, 94: 1
Parallel Simulations of Partially Stirred Methane Combustion, 94: 469
The Prediction of Pulverized Greek Lignite Combustion in Axisymmetric Furnaces, 92: 209
Prediction of the Near Burner Region and Measurements of NO_x and Particulate Emissions in Heavy Fuel Oil Spray Flames, 92: 231
Similarity Solutions in Buoyancy-Controlled Turbulent Diffusion Flame Modeling (Turbulent Buoyant Diffusion Flame Modeling), 92: 308
Species Conservation and Emission Indices for Flames Described by Similarity Solutions, 92: 465
Thermal Radiation from a Small-Scale Pool Fire: Influence of Externally Applied Radiation, 92: 71
Transition from Momentum to Buoyancy-Controlled Turbulent Jet Diffusion Flames and Flame Height Relationships, 92: 349
Turbulence-Chemistry Interactions in the Intermediate Regime of Premixed Combustion, 93: 41

6. COMBUSTION SYSTEMS: NEW
Dynamics of Phase Forming Processes in the Combustion of Metal-Gas Systems, 92: 201
An Imaging Neural Network Combustion Control System for Utility Boiler Applications, 94: 205

7. DETONATIONS: CONDENSED PHASE AND HETEROGENEOUS
—NONE

8. DETONATIONS: GAS PHASE
Corona-Induced Oxidation of Reactive Gaseous Mixtures, 92: 197
The Influence of the Heat Capacity and Diluent on Detonation Structure, 95: 206

9. DIAGNOSTICS: LASER
Coherent Anti-Stokes Raman Spectroscopy (CARS) and Laser-Induced Fluorescence (LIF) Measurements in a Rocket Engine Plume, 94: 77
Laser-Induced Fluorescence Measurements of Nitric Oxide in Laminar $C_2H_6/O_2/N_2$ Flames at High Pressure, 92: 485

10. DIAGNOSTICS: OPTICAL AND PHOTOGRAPHIC
Aerosol Dynamic Processes of Soot Aggregates in a Laminar Ethene Diffusion Flame, 92: 320
Automated Infrared Imaging Temperature Measurement with Application to Upward Flame Spread Studies. Part I, 92: 222
An Imaging Neural Network Combustion Control System for Utility Boiler Applications, 94: 205
Laser-Based Flame Species Profile Measurements: A Comparison with Flame Model Predictions, 92: 85
Simultaneous In Situ Measurement of Temperature and Size of Burning Char Particles in a Fluidized Bed Furnace By Means of Fiberoptic Pyrometry, 95: 191
Surface Properties of Turbulent Premixed Propane/Air Flames at Various Lewis Numbers, 93: 445

11. DIAGNOSTICS: OTHER
Dynamics of Phase Forming Processes in the Combustion of Metal-Gas Systems, 92: 201

12. EXPERIMENTAL TECHNIQUES OR RESULTS: BURNERS
Aerodynamic Characteristics of Swirling Spray Flames: Pressure-Jet Atomizer, 92: 25
Aerosol Dynamic Processes of Soot Aggregates in a Laminar Ethene Diffusion Flame, 92: 320
Chemical Structures of Fuel-Rich and Fuel-Lean Flames of CCl_4/CH_4 Mixtures, 94: 131
Detailed Structure Study of a Low Pressure, Stoichiometric $H_2/N_2O/Ar$ Flame, 94: 407
The Effect of Strain on Laminar Diffusion Flames of Chlorinated Hydrocarbons, 92: 187
Experimental Investigation of Stretched Premixed Flames Burning Mixtures of Methane and Methyl Chloride in Air and Comparison with Numerical Simulations, 94: 25
Experimental Study of Premixed Turbulent Combustion in Opposed Streams. Part I—Nonreacting Flow Field, 92: 377
Experimental Study of Premixed Turbulent Combustion in Opposed Streams. Part II—Reacting Flow Field and Extinction, 92: 396
Influence of Nitrogen Dilution and Flame Temperature on Soot Formation in Diffusion Flames, 92: 115
Influence of Sulfur Dioxide on Soot Formation in Diffusion Flames, 92: 410
Laser-Based Flame Species Profile Measurements: A Comparison with Flame Model Predictions, 92: 85
Magnetic Promotion of Combustion in Diffusion Flames, 93: 207
Metal Enhanced Soot and PAH Formation, 92: 241
Molecular Beam/Wien Filter Application to the Study of Charged Soot in Flames: Methodology and Mass Distributions of Particles in Butadiene Flames, 95: 61
Optical Detection of the Response of a Diffusion Flame to Excitation, 93: 349

13. EXPERIMENTAL TECHNIQUES OR RESULTS: PLUG FLOW REACTORS
Autoignition of *n*-Heptane and *n*-Tetradecane in Engine-like Conditions, 93: 279

14. EXPERIMENTAL TECHNIQUES OR RESULTS: QUASI-STATIC VESSELS
Experimental and Numerical Studies of Ditertiary Butyl Peroxide Combustion at High Pressures in a Rapid Compression Machine, 93: 303
Fundamental Features of Hydrocarbon Autoignition in a Rapid Compression Machine, 95: 291
Kinetic Studies of the Reactions of Ground State Atomic Carbon, $C(2p^2(^3P_j))$, with Halogenated Methanes Investigated by Time-Resolved Atomic Resonance Absorption Spectroscopy in the Vacuum Ultra-Violet, 93: 327

15. EXPERIMENTAL TECHNIQUES OR RESULTS: SHOCK TUBES
Ignition Delay Times in Ethylene Oxide-Oxygen-Argon Mixtures behind a Reflected Shock, 92: 481
Self-Ignition of Small-Ring Hydrocarbons Behind Reflected Shock Waves, 94: 108
Shock-Tube Investigation of Self-Ignition of *n*-Heptane-Air Mixtures Under Engine Relevant Conditions, 93: 421
Shock-Tube Study of CH_2O Pyrolysis and Oxidation, 92: 365

16. EXPERIMENTAL TECHIQUES OR RESULTS: WELL STIRRED REACTORS
Autoignition of *n*-Heptane and *n*-Tetradecane in Engine-like Conditions, 93: 279

17. FIRE OR EXPLOSION PHENOMENA, COMBUSTION SAFETY
Automated Infrared Imaging Temperature Measurement with Application to Upward Flame Spread Studies. Part I, 92: 222
Corona-Induced Oxidation of Reactive Gaseous Mixtures, 92: 197
Critical Temperatures for the Thermal Explosion of Liquids, 95: 307
Experiments on the Periodic Instability of Buoyant Plumes and Pool Fires, 93: 157
Temperature and Soot Volume Fraction Statistics in Toluene-Fired Pool Fires, 93: 270
Turbulent, Concurrent, Ceiling Flame Spread: The Effect of Buoyancy, 92: 45
Upper Explosive Limit of Dusts: Experimental Evidence for Its Existence Under Certain Circumstances, 94: 125

18. FLAME IGNITION OR STABILIZATION
An Analysis of the Ignition of Coal Dust Clouds, 92: 475
Autoignition-Delay Measurement over Lean to Rich Mixtures of n-Butane/Air under Swirl Conditions, 92: 254
Critical Temperatures for the Thermal Explosion of Liquids, 95: 307
Dynamics of Flow Stretch on Coal Ignition Mechanism, 92: 60
High-Energy Nd-Yag Laser Ignition of Coals: Experimental Observations, 93: 19
High-Energy Nd-Yag Laser Ignition of Coals: Modeling Analysis, 94: 349
Ignition and Combustion of Aluminum/Magnesium Alloy Particles in O_2 at High Pressures, 92: 125
Ignition and Extinction of Flames Near Surfaces: Combustion of H_2 in Air, 95: 313
Ignition in an Unsteady Mixing Layer Subject to Strain and Variable Pressure, 95: 31
Ignition of Blended-Fuel Droplet in High-Temperature Atmosphere, 93: 149
Numerical Investigation of the Ignition of Dilute Fuel Sprays Including Detailed Chemistry, 93: 239
Preface to Heterogeneous Combustion Workshop Papers, 95: 341
Preignition Dynamics of RDX-Based Energetic Materials Under CO_2 Laser Heating, 95: 351
Premixed Hydrogen-Oxygen Flames. Part II: Quasi-isobaric Ignition Near the Flammability Limits, 93: 408
Synergy Between Additives in Stimulating Diesel-Fuel Ignition, 95: 424

19. FLAME QUENCHING OR EXTINCTION
Analytical Numerical Modeling of Flame-Balls in Hydrogen-Air Mixtures, 94: 113
Asymptotic Theory of Flame Extinction with Surface Radiation, 92: 1
The Effect of Strain on Laminar Diffusion Flames of Chlorinated Hydrocarbons, 92: 187
Experimental Investigation of Stretched Premixed Flames Burning Mixtures of Methane and Methyl Chloride in Air and Comparison with Numerical Simulations, 94: 25
Extinction of Pool Flames by Means of a DC Electric Field, 94: 244
Ignition and Extinction of Flames Near Surfaces: Combustion of H_2 in Air, 95: 313
Images of the Quenching of a Flame by a Vortex—To Quantify Regimes of Turbulent Combustion, 94: 58

20. FLAMES: DIFFUSION
Aerodynamic Characteristics of Swirling Spray Flames: Pressure-Jet Atomizer, 92: 25
Aerosol Dynamic Processes of Soot Aggregates in a Laminar Ethene Diffusion Flame, 92: 320
Analytical Solution to the Flame Trajectory Based on the Analysis of "Scaling of Buoyant Turbulent Jet Diffusion Flames" by N. Peters and J. Göttgens, 93: 336
Burning of a Spherical Fuel Droplet in a Uniform Flowfield with Exact Property Variation, 94: 321
Carbon Monoxide Emissions from Turbulent Nonpremixed Jet Flames, 94: 462
Comment on "The Combustion Phase of Burning Metals" by T. A. Steinberg, D. B. Wilson, and F. Benz, 93: 338
Comments on "A Comparison of Numerical and Analytical Solution of Creeping Flame Spread Over Thermally Thin Material, 95: 336
A Comparison of Numerical and Analytical Solution of the Creeping Flame Spread Over Thermally Thin Material, 93: 434
The Compositional Structure and the Effects of Exothermicity in a Nonpremixed Planar Jet Flame, 94: 217
Convective Burning of a Droplet Containing a Single Metal Particle, 93: 215
The Effect of Alkali Metals on a Laminar Ethylene Diffusion Flame, 92: 266
The Effect of Strain on Laminar Diffusion Flames of Chlorinated Hydrocarbons, 92: 187
An Examination of Flame Length Data from Vertical Turbulent Diffusion Flames, 94: 426
Experiments on the Periodic Instability of Buoyant Plumes and Pool Fires, 93: 157
Flame Spread in Laminar Mixing Layers: The Triple Flame, 95: 276
Greatly Enhanced Soot Scattering in Flickering CH_4/Air Diffusion Flames, 95: 229
Ignition in an Unsteady Mixing Layer Subject to Strain and Variable Pressure, 95: 31
Influence of Nitrogen Dilution and Flame Temperature on Soot Formation in Diffusion Flames, 92: 115
Influence of Radiative Loss on Nitric Oxide Formation in Counterflow Diffusion Flames at High Pressure, 93: 230

Influence of Sulfur Dioxide on Soot Formation in Diffusion Flames, 92: 410
Laminar Counterflow Spray Diffusion Flames: A Comparison Between Experimental Results and Complex Chemistry Calculations, 95: 261
Magnetic Promotion of Combustion in Diffusion Flames, 93: 207
Optical Detection of the Response of a Diffusion Flame to Excitation, 93: 349
Oxides of Nitrogen Emissions from Turbulent Jet Flames: Part II—Fuel Dilution and Partial Premixing Effects, 93: 255
Response to Comment by I. Glassman on "The Combustion Phase of Burning Metals", 93: 343
A Response to the Comments by M.A. Delichatsios on "A Comparison of Numerical and Analytical Solution of Creeping Flame Spread Over Thermally Thin Material, 95: 340
Role of Inner and Outer Structures in Transitional Jet Diffusion Flame, 92: 274
Similarity Solutions in Buoyancy-Controlled Turbulent Diffusion Flame Modeling (Turbulent Buoyant Diffusion Flame Modeling), 92: 308
Species Conservation and Emission Indices for Flames Described by Similarity Solutions, 92: 465
Spray Structure in Counterflowing Streams with and without a Flame, 94: 161
Temperature and Soot Volume Fraction Statistics in Toluene-Fired Pool Fires, 93: 270
Total Radiative Heat Loss in Jet Flames from Single Point Radiative Flux Measurements, 94: 265
Transition from Momentum to Buoyancy-Controlled Turbulent Jet Diffusion Flames and Flame Height Relationships, 92: 349
Ventilation-Controlled Combustion of Polymers, 95: 151

21. FLAMES: NONSTEADY
Dynamic Burning Rate Measurements of Metalized Composite Propellants Using the Laser-Recoil Technique, 94: 178
Low-Frequency Combustion Instability Mechanisms in a Side-Dump Combustor, 94: 363
Low-Frequency Combustion Oscillations in a Model Afterburner, 94: 253
Numerical Simulation of Flame Disturbance Growth Induced by a Pressure Gradient, 95: 76

22. FLAMES: PREMIXED
Analytical Numerical Modeling of Flame-Balls in Hydrogen-Air Mixtures, 94: 113
Autoignition-Delay Measurement over Lean to Rich Mixtures of n-Butane/Air under Swirl Conditions, 92: 254
Burning Velocities of Hydrogen-Air Mixtures, 94: 330
Catalytic Combustion of Hydrogen-Air Mixtures in Stagnation Flows, 93: 138
Chemical Structures of Fuel-Rich and Fuel-Lean Flames of CCl_4/CH_4 Mixtures, 94: 131
A Comparison of Flamelet Models for Premixed Turbulent Combustion, 95: 101
A Computational Study of Methane-Air Combustion over Heated Catalytic and Non-Catalytic Surfaces, 93: 185
A Computational Study of Sooting Limits in Laminar Premixed Flames of Ethane, Ethylene, and Acetylene, 93: 467
Detailed Structure Study of a Low Pressure, Stoichiometric $H_2/N_2O/Ar$ Flame, 94: 407
Direct Numerical Simulation of Turbulent Reacting Flow Using a Reduced Hydrogen-Oxygen Mechanism, 95: 247
Direct Simulation and Modeling of Flame-Wall Interaction for Premixed Turbulent Combustion, 95: 118
Direct Simulations of Premixed Turbulent Flames with Nonunity Lewis Numbers, 94: 41
Effects of Rotation on Cellular Premixed Flames Stabilized on Rotating Porous Spheres, 92: 469
Experimental Investigation of Stretched Premixed Flames Burning Mixtures of Methane and Methyl Chloride in Air and Comparison with Numerical Simulations, 94: 25
Experimental Study of a Premixed Turbulent Stagnating Flame, 95: 430
Experimental Study of Premixed Turbulent Combustion in Opposed Streams. Part I—Nonreacting Flow Field, 92: 377
Experimental Study of Premixed Turbulent Combustion in Opposed Streams. Part II—Reacting Flow Field and Extinction, 92: 396
Images of the Quenching of a Flame by a Vortex—To Quantify Regimes of Turbulent Combustion, 94: 58
Laminar Burning Velocities and Markstein Numbers of Hydrocarbon/Air Flames, 95: 407
Laser-Induced Fluorescence Measurements of

Nitric Oxide in Laminar $C_2H_6/O_2/N_2$ Flames at High Pressure, 92: 485
Local Response and Surface Properties of Premixed Flames During Interactions with Kármán Vortex Streets, 94: 146
Low-Frequency Combustion Instability Mechanisms in a Side-Dump Combustor, 94: 363
Metal Enhanced Soot and PAH Formation, 92: 241
A Model for Condensed Combustion Synthesis of Nonstoichiometric Homogenous Solids, 93: 1
The Necessity of Using Detailed Kinetics in Models for Premixed Combustion Within Porous Media, 93: 457
Numerical Simulation of Flame Disturbance Growth Induced by a Pressure Gradient, 95: 76
Numerical Simulation of Stoichiometric Premixed Flames Burning CH_3Cl/CH_4/Air Mixtures at Atmospheric Pressure with a Full and Short Reaction Mechanism and Comparison of the Flame Speeds with Experimental Results, 92: 419
Preface to Heterogeneous Combustion Workshop Papers, 95: 341
Premixed Hydrogen-Oxygen Flames. Part I: Flame Structure Near the Flammability Limits, 93: 391
Premixed Hydrogen-Oxygen Flames. Part II: Quasi-isobaric Ignition Near the Flammability Limits, 93: 408
A Reduced Kinetic Mechanism for Premixed CH_3Cl/Air Flames, 92: 440
A Reduced Kinetic Mechanism for Premixed $CH_3/Cl/CH_4$/Air Flames, 94: 191
Simulation of Electric Field Effects in Premixed Methane Flames, 94: 433
Surface Properties of Turbulent Premixed Propane/Air Flames at Various Lewis Numbers, 93: 445
Turbulence-Chemistry Interactions in the Intermediate Regime of Premixed Combustion, 93: 41

23. FLAMES: TURBULENT
Analytical Solution to the Flame Trajectory Based on the Analysis of "Scaling of Buoyant Turbulent Jet Diffusion Flames" by N. Peters and J. Göttgens, 93: 336
Burning Velocities of Hydrogen-Air Mixtures, 94: 330
Carbon Monoxide Emissions from Turbulent Nonpremixed Jet Flames, 94: 462
A Comparison of Flamelet Models for Premixed Turbulent Combustion, 95: 101
The Compositional Structure and the Effects of Exothermicity in a Nonpremixed Planar Jet Flame, 94: 217
Direct Numerical Simulation of Turbulent Reacting Flow Using a Reduced Hydrogen-Oxygen Mechanism, 95: 247
Direct Simulation and Modeling of Flame-Wall Interaction for Premixed Turbulent Combustion, 95: 118
Direct Simulations of Premixed Turbulent Flames with Nonunity Lewis Numbers, 94: 41
An Examination of Flame Length Data from Vertical Turbulent Diffusion Flames, 94: 426
Experimental Study of a Premixed Turbulent Stagnating Flame, 95: 430
Experimental Study of Premixed Turbulent Combustion in Opposed Streams. Part I—Nonreacting Flow Field, 92: 377
Experimental Study of Premixed Turbulent Combustion in Opposed Streams. Part II—Reacting Flow Field and Extinction, 92: 396
Experiments on the Periodic Instability of Buoyant Plumes and Pool Fires, 93: 157
Images of the Quenching of a Flame by a Vortex—To Quantify Regimes of Turbulent Combustion, 94: 58
Local Response and Surface Properties of Premixed Flames During Interactions with Kármán Vortex Streets, 94: 146
Oxides of Nitrogen Emissions from Turbulent Jet Flames: Part II—Fuel Dilution and Partial Premixing Effects, 93: 255
PDF Calculations of Turbulent Nonpremixed Flames of H_2/CO_2 Using Reduced Chemical Mechanisms, 95: 133
Preface to Heterogeneous Combustion Workshop Papers, 95: 341
Similarity Solutions in Buoyancy-Controlled Turbulent Diffusion Flame Modeling (Turbulent Buoyant Diffusion Flame Modeling), 92: 308
Surface Properties of Turbulent Premixed Propane/Air Flames at Various Lewis Numbers, 93: 445
Temperature and Soot Volume Fraction Statistics in Toluene-Fired Pool Fires, 93: 270
Total Radiative Heat Loss in Jet Flames from Single Point Radiative Flux Measurements, 94: 265
Transition from Momentum to Buoyancy-Con-

trolled Turbulent Jet Diffusion Flames and Flame Height Relationships, 92: 349
Turbulence-Chemistry Interactions in the Intermediate Regime of Premixed Combustion, 93: 41
Turbulent, Concurrent, Ceiling Flame Spread: The Effect of Buoyancy, 92: 45
Ventilation-Controlled Combustion of Polymers, 95: 151

24. FLAMMABILITY
Premixed Hydrogen-Oxygen Flames. Part I: Flame Structure Near the Flammability Limits, 93: 391

25. FLUID DYNAMICS: STEADY FLOW
Flame Spread in Laminar Mixing Layers: The Triple Flame, 95: 276

26. FLUID DYNAMICS: NONSTEADY AND INSTABILITY
Effects of Rotation on Cellular Premixed Flames Stabilized on Rotating Porous Spheres, 92: 469
Experimental and Numerical Studies of Ditertiary Butyl Peroxide Combustion at High Pressures in a Rapid Compression Machine, 93: 303
Experiments on the Periodic Instability of Buoyant Plumes and Pool Fires, 93: 157
Laminar Burning Velocities and Markstein Numbers of Hydrocarbon/Air Flames, 95: 407
Local Response and Surface Properties of Premixed Flames During Interactions with Kármán Vortex Streets, 94: 146
A Numerical Model for Temperature Gradient and Particle Effects on Rijke Burner Oscillations, 94: 1
Numerical Simulation of Flame Disturbance Growth Induced by a Pressure Gradient, 95: 76
Preface to Heterogeneous Combustion Workshop Papers, 95: 341
Role of Inner and Outer Structures in Transitional Jet Diffusion Flame, 92: 274

27. FLUID DYNAMICS: TURBULENT
Experimental Study of a Premixed Turbulent Stagnating Flame, 95: 430
Images of the Quenching of a Flame by a Vortex—To Quantify Regimes of Turbulent Combustion, 94: 58
Local Response and Surface Properties of Premixed Flames During Interactions with Kármán Vortex Streets, 94: 146
On the Origins of Spray Sectional Conservation Equations, 93: 90
The Prediction of Pulverized Greek Lignite Combustion in Axisymmetric Furnaces, 92: 209
Preface to Heterogeneous Combustion Workshop Papers, 95: 341
Stoichiometry and Polydisperse Effects in Premixed Spray Flames, 93: 97
Transition from Momentum to Buoyancy-Controlled Turbulent Jet Diffusion Flames and Flame Height Relationships, 92: 349

28. FUELS, OXIDIZERS AND ADDITIVES, NONCONVENTIONAL
Dynamic Burning Rate Measurements of Metalized Composite Propellants Using the Laser-Recoil Technique, 94: 178
The Influence of Phosphorus Oxides and Acids on the Rate of H+ OH Recombination, 94: 91
Photometric Determination of the Rate of H_2O Formation from H and OH in the Presence of Phosphine Combustion Products, 94: 341
Preface to Heterogeneous Combustion Workshop Papers, 95: 341
Synergy Between Additives in Stimulating Diesel-Fuel Ignition, 95: 424
Thermodynamics of Gas Phase Chromium Species: The Chromium Oxides, the Chromium Oxyhydroxides, and Volatility Calculations in Waste Incineration Processes, 93: 119

29. HETEROGENEOUS COMBUSTION: AEROSOLS, SPRAYS AND AIRBORNE DUSTS
Aerodynamic Characteristics of Swirling Spray Flames: Pressure-Jet Atomizer, 92: 25
Autoignition of Droplets in Nondilute Monodisperse Clouds, 94: 397
Autoignition of *n*-Heptane and *n*-Tetradecane in Engine-like Conditions, 93: 279
Derivation of Near-Field Sectional Equations for the Dynamics of Polydisperse Spray Flows: An Analysis of the Relaxation Zone Behind a Normal Shock Wave, 95: 380
Laminar Counterflow Spray Diffusion Flames: A Comparison Between Experimental Results and Complex

Chemistry Calculations, 95: 261
Numerical Investigation of the Ignition of Dilute Fuel Sprays Including Detailed Chemistry, 93: 239
On the Origins of Spray Sectional Conservation Equations, 93: 90
Prediction of the Near Burner Region and Measurements of NO_x and Particulate Emissions in Heavy Fuel Oil Spray Flames, 92: 231
Preface to Heterogeneous Combustion Workshop Papers, 95: 341
Spray Structure in Counterflowing Streams with and without a Flame, 94: 161
Stoichiometry and Polydisperse Effects in Premixed Spray Flames, 93: 97
Upper Explosive Limit of Dusts: Experimental Evidence for Its Existence Under Certain Circumstances, 94: 125

30. HETEROGENEOUS COMBUSTION: CATALYTIC COMBUSTION
Catalytic Combustion of Hydrogen-Air Mixtures in Stagnation Flows, 93: 138
A Computational Study of Methane-Air Combustion over Heated Catalytic and Non-Catalytic Surfaces, 93: 185
The Mechanism of Lead Catalysis of Double-Base Rocket Propellant Combustion: Super-Rate Burning and the Plateau/Mesa Phenomena, 95: 240

31. HETEROGENEOUS COMBUSTION: COAL, CHAR OR CARBON
An Analysis of the Ignition of Coal Dust Clouds, 92: 475
Book Review of Coal Quality and Combustion Performance: An International Perspective by J.F. Unswerth et al., 95: 244
Coal Burning Properties Determined from CO_2 Profiles, 94: 449
Combustion and Percolative Fragmentation of Carbons, 95: 342
Determination of Kinetic Data for Soot Oxidation. Modeling of Competition Between Oxygen Diffusion and Reaction During Thermogravimetric Analysis, 95: 87
Dynamics of Flow Stretch on Coal Ignition Mechanism, 92: 60
The Effect of Particle Size on NO Formation in a Large-Scale Pulverized Coal-Fired Laboratory Furnace: Measurements and Modeling, 93: 316
Further Development of the Electrodynamic Chamber for Studying Single-Particle Oxidation and Nonuniform Shrinkage of Char Particles, 95: 362
Gasification-Induced Densification of Carbons: From Soot to Form Coke, 95: 427
Global Rates of Devolatilization for Various Coal Types, 94: 293
High-Energy Nd-Yag Laser Ignition of Coals: Experimental Observations, 93: 19
High-Energy Nd-Yag Laser Ignition of Coals: Modeling Analysis, 94: 349
The Impact of Soot on the Combustion Characteristics of Coal Particles of Various Types, 95: 1
Importance of Solid Fuel Properties to Nitrogen Oxide Formation Through HCN and NH_3 in Small Particle Combustion, 95: 22
A Model of Coal Combustion Dynamics in a Fluidized Bed Combuster, 95: 219
Numerical Modeling of Two-Dimensional Smoldering Processes, 95: 170
Observations on the Combustion Behavior of Coal Water Fuels and Coal Water Fuels Impregnated with Calcium Magnesium Acetate, 93: 61
Oxidation Rates of a Single Char Particle in an Electrodynamic Balance, 95: 371
The Prediction of Pulverized Greek Lignite Combustion in Axisymmetric Furnaces, 92: 209
Preface to Heterogeneous Combustion Workshop Papers, 95: 341
Simultaneous In Situ Measurement of Temperature and Size of Burning Char Particles in a Fluidized Bed Furnace By Means of Fiberoptic Pyrometry, 95: 191

32. HETEROGENEOUS COMBUSTION: SINGLE DROPLET OR PARTICLE
Asymptotic Analysis for the Burning of *n*-Heptane Droplets Using a Four-Step Reduced Mechanism, 93: 375
Asymptotic Analysis of Monopropellant Droplet Burning for the Reaction $nA \rightarrow B$, 94: 35
Autoignition of Droplets in Nondilute Monodisperse Clouds, 94: 397
Burning of a Spherical Fuel Droplet in a Uniform Flowfield with Exact Property Variation, 94: 321
Combustion and Percolative Fragmentation of Carbons, 95: 342
Comment on "The Combustion Phase of Burning Metals" by T. A. Steinberg, D. B. Wilson, and F. Benz, 93: 338

Comparison Between Experimental Measurements and Numerical Predictions of Internal Temperature Distributions of a Droplet Vaporizing under High-Temperature Convective Conditions, 93: 287
Convective Burning of a Droplet Containing a Single Metal Particle, 93: 215
Further Development of the Electrodynamic Chamber for Studying Single-Particle Oxidation and Nonuniform Shrinkage of Char Particles, 95: 362
Ignition and Combustion of Aluminum/Magnesium Alloy Particles in O_2 at High Pressures, 92: 125
Ignition of Blended-Fuel Droplet in High-Temperature Atmosphere, 93: 149
Numerical Analysis of Variable-Fluid-Property Effects on the Convective Heat and Mass Transfer of Fuel Droplets, 92: 459
Observations on the Combustion Behavior of Coal Water Fuels and Coal Water Fuels Impregnated with Calcium Magnesium Acetate, 93: 61
Oxidation Rates of a Single Char Particle in an Electrodynamic Balance, 95: 371
Preface to Heterogeneous Combustion Workshop Papers, 95: 341
Response to Comment by I. Glassman on "The Combustion Phase of Burning Metals", 93: 343

33. HETEROGENEOUS COMBUSTION: SLAB, POOL, FLUIDIZED BED, ETC.
Asymptotic Theory of Flame Extinction with Surface Radiation, 92: 1
Automated Infrared Imaging Temperature Measurement with Application to Upward Flame Spread Studies. Part I, 92: 222
An Analysis of the Ignition of Coal Dust Clouds, 92: 475
Book Review of Coal Quality and Combustion Performance: An International Perspective by J.F. Unswerth et al., 95: 244
Coal Burning Properties Determined from CO_2 Profiles, 94: 449
Comments on "A Comparison of Numerical and Analytical Solution of Creeping Flame Spread Over Thermally Thin Material, 95: 336
A Comparison of Numerical and Analytical Solution of the Creeping Flame Spread Over Thermally Thin Material, 93: 434
Computational Simulation of Diamond Chemical Vapor Deposition in Premixed $C_2H_2/O_2/H_2$ and CH_4/O_2-Strained Flames, 92: 144
Extinction of Pool Flames by Means of a DC Electric Field, 94: 244
Flame Spreading into a Hole with Rear End Open in a Double-Base Propellant: The Effect of Hole Diameter, 92: 334
New Results in the Theory of Filtration Combustion, 94: 308
A Response to the Comments by M.A. Delichatsios on "A Comparison of Numerical and Analytical Solution of Creeping Flame Spread Over Thermally Thin Material, 95: 340
Thermal Radiation from a Small-Scale Pool Fire: Influence of Externally Applied Radiation, 92: 71
Turbulent, Concurrent, Ceiling Flame Spread: The Effect of Buoyancy, 92: 45
Ventilation-Controlled Combustion of Polymers, 95:151

34. INHIBITION
—NONE

35. IONIZATION AND/OR ELECTRICAL EFFECTS
Corona-Induced Oxidation of Reactive Gaseous Mixtures, 92: 197
The Effect of Alkali Metals on a Laminar Ethylene Diffusion Flame, 92: 266
Extinction of Pool Flames by Means of a DC Electric Field, 94: 244
Magnetic Promotion of Combustion in Diffusion Flames, 93: 207
Molecular Beam/Wien Filter Application to the Study of Charged Soot in Flames: Methodology and Mass Distributions of Particles in Butadiene Flames, 95: 61
Simulation of Electric Field Effects in Premixed Methane Flames, 94: 433

36. KINETICS AND/OR REACTION MECHANISMS: DETAILED
Autoignition of *n*-Heptane and *n*-Tetradecane in Engine-like Conditions, 93: 279
Computational Simulation of Diamond Chemical Vapor Deposition in Premixed $C_2H_2/O_2/H_2$ and CH_4/O_2-Strained Flames, 92: 144
A Computational Study of Methane-Air Combustion over Heated Catalytic and Non-Catalytic Surfaces, 93: 185
A Computational Study of Sooting Limits in Laminar Premixed Flames of Ethane, Ethyl-

ene, and Acetylene, 93: 467
Detailed Structure Study of a Low Pressure, Stoichiometric H_2/N_2O/Ar Flame, 94: 407
Effects of Organic Chlorine on the Chemical Composition and Carbon Number Distribution of Pyrolysis Tars, 92: 161
Enhanced Destruction of CH_3Cl in Postflame Combustion Gases, 92: 106
Ignition and Extinction of Flames Near Surfaces: Combustion of H_2 in Air, 95: 313
The Influence of Phosphorus Oxides and Acids on the Rate of H+ OH Recombination, 94: 91
Kinetic Fundamentals of Alkane Autoignition at Low Temperatures, 93: 202
Kinetic Studies of the Reactions of Ground State Atomic Carbon, $C(2p^2(^3P_j))$, with Halogenated Methanes Investigated by Time-Resolved Atomic Resonance Absorption Spectroscopy in the Vacuum Ultra-Violet, 93: 327
Laser-Based Flame Species Profile Measurements: A Comparison with Flame Model Predictions, 92: 85
The Necessity of Using Detailed Kinetics in Models for Premixed Combustion Within Porous Media, 93: 457
Numerical Investigation of the Ignition of Dilute Fuel Sprays Including Detailed Chemistry, 93: 239
Numerical Simulation of Stoichiometric Premixed Flames Burning CH_3Cl/CH_4/Air Mixtures at Atmospheric Pressure with a Full and Short Reaction Mechanism and Comparison of the Flame Speeds with Experimental Results, 92: 419
Parallel Simulations of Partially Stirred Methane Combustion, 94: 469
Photometric Determination of the Rate of H_2O Formation from H and OH in the Presence of Phosphine Combustion Products, 94: 341
Preface to Heterogeneous Combustion Workshop Papers, 95: 341
A Reduced Kinetic Mechanism for Premixed CH_3Cl/Air Flames, 92: 440
A Reduced Kinetic Mechanism for Premixed $CH_3/Cl/CH_4$/Air Flames, 94: 191
Reduced Kinetic Mechanisms and Their Numerical Treatment I: Wet CO Flames, 94: 271
Semiempirical Molecular Orbital Estimation of the Relative Stability of Bianthryls Produced by Anthracene Pyrolysis, 94: 233
Shock-Tube Study of CH_2O Pyrolysis and Oxidation, 92: 365
Synergy Between Additives in Stimulating Diesel-Fuel Ignition, 95: 424
Thermal Decomposition of Energetic Materials 63. Surface Reaction Zone Chemistry of Simulated Burning 1,3,5,5-Tetranitrohexahydropyrimidine (DNNC or TNDA) Compared to RDX, 95: 183

37. KINETICS AND/OR REACTION MECHANISMS: OVERALL
Asymptotic Analysis for the Burning of *n*-Heptane Droplets Using a Four-Step Reduced Mechanism, 93: 375
Fundamental Features of Hydrocarbon Autoignition in a Rapid Compression Machine, 95: 291
Importance of Solid Fuel Properties to Nitrogen Oxide Formation Through HCN and NH_3 in Small Particle Combustion, 95: 22
The Influence of Phosphorus Oxides and Acids on the Rate of H+ OH Recombination, 94: 91
PDF Calculations of Turbulent Nonpremixed Flames of H_2/CO_2 Using Reduced Chemical Mechanisms, 95: 133
A Reduced Kinetic Mechanism for Premixed $CH_3/Cl/CH_4$/Air Flames, 94: 191
Reduced Kinetic Mechanisms and Their Numerical Treatment I: Wet CO Flames, 94: 271
Thermal Decomposition of Energetic Materials 58. Chemistry of Ammonium Nitrate and Ammonium Dinitramide Near the Burning Surface Temperature, 92: 178

38. POLLUTANTS: INORGANICS AND SOOT
Aerosol Dynamic Processes of Soot Aggregates in a Laminar Ethene Diffusion Flame, 92: 320
An Analysis of the Ignition of Coal Dust Clouds, 92: 475
Book Review of Coal Quality and Combustion Performance: An International Perspective by J.F. Unswerth et al., 95: 244
A Computational Study of Sooting Limits in Laminar Premixed Flames of Ethane, Ethylene, and Acetylene, 93: 467
Determination of Kinetic Data for Soot Oxidation. Modeling of Competition Between Oxygen Diffusion and Reaction During Thermogravimetric Analysis, 95: 87
The Effect of Alkali Metals on a Laminar Ethylene Diffusion Flame, 92: 266
Enhanced Destruction of CH_3Cl in Postflame

Combustion Gases, 92: 106
An Equilibrium Analysis to Determine the Speciation of Metals in an Incinerator, 93: 31
Greatly Enhanced Soot Scattering in Flickering CH_4/Air Diffusion Flames, 95: 229
The Impact of Soot on the Combustion Characteristics of Coal Particles of Various Types, 95: 1
Influence of Nitrogen Dilution and Flame Temperature on Soot Formation in Diffusion Flames, 92: 115
Influence of Sulfur Dioxide on Soot Formation in Diffusion Flames, 92: 410
Metal Enhanced Soot and PAH Formation, 92: 241
Molecular Beam/Wien Filter Application to the Study of Charged Soot in Flames: Methodology and Mass Distributions of Particles in Butadiene Flames, 95: 61
Prediction of the Near Burner Region and Measurements of NO_X and Particulate Emissions in Heavy Fuel Oil Spray Flames, 92: 231
A Reduced Kinetic Mechanism for Premixed CH_3Cl/CH_4/Air Flames, 94: 191
Refractive Indices of Pyrolytic Graphite, Amorphous Carbon, and Flame Soot in the Temperature Range 25° to 600°C, 94: 381
Temperature and Soot Volume Fraction Statistics in Toluene-Fired Pool Fires, 93: 270
Thermodynamics of Gas Phase Chromium Species: The Chromium Oxides, the Chromium Oxyhydroxides, and Volatility Calculations in Waste Incineration Processes, 93: 119

39. POLLUTANTS: NO_X
The Effect of Particle Size on NO Formation in a Large-Scale Pulverized Coal-Fired Laboratory Furnace: Measurements and Modeling, 93: 316
Importance of Solid Fuel Properties to Nitrogen Oxide Formation Through HCN and NH_3 in Small Particle Combustion, 95: 22
Laser-Induced Fluorescence Measurements of Nitric Oxide in Laminar $C_2H_6/O_2/N_2$ Flames at High Pressure, 92: 485
Oxides of Nitrogen Emissions from Turbulent Jet Flames: Part II—Fuel Dilution and Partial Premixing Effects, 93: 255
Prediction of the Near Burner Region and Measurements of NO_X and Particulate Emissions in Heavy Fuel Oil Spray Flames, 92: 231
Species Conservation and Emission Indices for Flames Described by Similarity Solutions, 92: 465

40. POLLUTANTS: OTHER
Carbon Monoxide Emissions from Turbulent Nonpremixed Jet Flames, 94: 462
Effects of Organic Chlorine on the Chemical Composition and Carbon Number Distribution of Pyrolysis Tars, 92: 161
Influence of Radiative Loss on Nitric Oxide Formation in Counterflow Diffusion Flames at High Pressure, 93: 230

41. PROPELLANTS: PYROTECHNICS AND EXPLOSIVES
Dynamic Burning Rate Measurements of Metalized Composite Propellants Using the Laser-Recoil Technique, 94: 178
Dynamics of Phase Forming Processes in the Combustion of Metal-Gas Systems, 92: 201
Flame Spreading into a Hole with Rear End Open in a Double-Base Propellant: The Effect of Hole Diameter, 92: 334
Ignition and Combustion of Aluminum/Magnesium Alloy Particles in O_2 at High Pressures, 92: 125
Kinetics of Thermolysis of Ring-Substituted Arylammonium Nitrates, 92: 283
The Mechanism of Lead Catalysis of Double-Base Rocket Propellant Combustion: Super-Rate Burning and the Plateau/Mesa Phenomena, 95: 240
Preface to Heterogeneous Combustion Workshop Papers, 95: 341
Preignition Dynamics of RDX-Based Energetic Materials Under CO_2 Laser Heating, 95: 351
Thermal Decomposition of Energetic Materials 58. Chemistry of Ammonium Nitrate and Ammonium Dinitramide Near the Burning Surface Temperature, 92: 178
Thermal Decomposition of Energetic Materials 59. Characterization of the Residue of Hexanitrohexaazaisowurtzitane, 92: 456
Thermal Decomposition of Energetic Materials 60. Major Reaction Stages of a Simulated Burning Surface of NH_4ClO_4, 94: 70
Thermal Decomposition of Energetic Materials 63. Surface Reaction Zone Chemistry of Simulated Burning 1,3,5,5-Tetranitrohexahy-

dropyrimidine (DNNC or TNDA) Compared to RDX, 95: 183

42. PYROLYSIS AND THERMAL DECOMPOSITION
Asymptotic, Approximate, and Numerical Solutions for the Heatup and Pyrolysis of Materials Including Reradiation Losses, 92: 292
Effects of Organic Chlorine on the Chemical Composition and Carbon Number Distribution of Pyrolysis Tars, 92: 161
Enhanced Destruction of CH_3Cl in Postflame Combustion Gases, 92: 106
An Experimental and Modeling Study of Pressure Effects on Tar Release by Rapid Pyrolysis of Cellulose Sheets in a Screen Heater, 95: 47
Global Rates of Devolatilization for Various Coal Types, 94: 293
Importance of Solid Fuel Properties to Nitrogen Oxide Formation Through HCN and NH_3 in Small Particle Combustion, 95: 22
Kinetics of Thermolysis of Ring-Substituted Arylammonium Nitrates, 92: 283
The Mechanism of Lead Catalysis of Double-Base Rocket Propellant Combustion: Super-Rate Burning and the Plateau/Mesa Phenomena, 95: 240
The Prediction of Pulverized Greek Lignite Combustion in Axisymmetric Furnaces, 92: 209
Self-Ignition of Small-Ring Hydrocarbons Behind Reflected Shock Waves, 94: 108
Semiempirical Molecular Orbital Estimation of the Relative Stability of Bianthryls Produced by Anthracene Pyrolysis, 94: 233
Shock-Tube Study of CH_2O Pyrolysis and Oxidation, 92: 365
Thermal Decomposition of Energetic Materials 58. Chemistry of Ammonium Nitrate and Ammonium Dinitramide Near the Burning Surface Temperature, 92: 178
Thermal Decomposition of Energetic Materials 59. Characterization of the Residue of Hexanitrohexaazaisowurtzitane, 92: 456
Thermal Decomposition of Energetic Materials 60. Major Reaction Stages of a Simulated Burning Surface of NH_4ClO_4, 94: 70
Thermal Decomposition of Energetic Materials 63. Surface Reaction Zone Chemistry of Simulated Burning 1,3,5,5-Tetranitrohexahydropyrimidine (DNNC or TNDA) Compared to RDX, 95: 183

43. RADIATION SPECTRA AND EXCITED SPECIES
Aerosol Dynamic Processes of Soot Aggregates in a Laminar Ethene Diffusion Flame, 92: 320
Greatly Enhanced Soot Scattering in Flickering CH_4/Air Diffusion Flames, 95: 229
Influence of Radiative Loss on Nitric Oxide Formation in Counterflow Diffusion Flames at High Pressure, 93: 230
Kinetic Studies of the Reactions of Ground State Atomic Carbon, $C(2p^2(^3P_j))$, with Halogenated Methanes Investigated by Time-Resolved Atomic Resonance Absorption Spectroscopy in the Vacuum Ultra-Violet, 93: 327
Refractive Indices of Pyrolytic Graphite, Amorphous Carbon, and Flame Soot in the Temperature Range 25° to 600°C, 94: 381
Simultaneous In Situ Measurement of Temperature and Size of Burning Char Particles in a Fluidized Bed Furnace By Means of Fiberoptic Pyrometry, 95: 191
Thermal Radiation from a Small-Scale Pool Fire: Influence of Externally Applied Radiation, 92: 71
Total Radiative Heat Loss in Jet Flames from Single Point Radiative Flux Measurements, 94: 265

44. SMOLDERING AND LOW TEMPERATURE OXIDATION-NONE
Numerical Modeling of Two-Dimensional Smoldering Processes, 95: 170

45. THERMOCHEMISTRY AND THERMODYNAMICS
Comment on "The Combustion Phase of Burning Metals" by T. A. Steinberg, D. B. Wilson, and F. Benz, 93: 338
An Equilibrium Analysis to Determine the Speciation of Metals in an Incinerator, 93: 31
Kinetics of Thermolysis of Ring-Substituted Arylammonium Nitrates, 92: 283
Response to Comment by I. Glassman on "The Combustion Phase of Burning Metals", 93: 343
Self-Ignition of Small-Ring Hydrocarbons Behind Reflected Shock Waves, 94: 108
Thermodynamics of Gas Phase Chromium Species: The Chromium Oxides, the Chromium Oxyhydroxides, and Volatility Calculations in Waste Incineration Processes, 93: 119

46. TRANSPORT OF HEAT AND MASS
Determination of Kinetic Data for Soot Oxidation. Modeling of Competition Between Oxygen Diffusion and Reaction During Thermogravimetric Analysis, 95: 87
New Results in the Theory of Filtration Combustion, 94: 308
Numerical Analysis of Variable-Fluid-Property Effects on the Convective Heat and Mass Transfer of Fuel Droplets, 92: 459
Refractive Indices of Pyrolytic Graphite, Amorphous Carbon, and Flame Soot in the Temperature Range 25° to 600°C, 94: 381
